on available service plans, pricing and how to purchase the *Tracknology* service, use the navigation bars located at the top and bottom of your browser, or call our Sales Team *toll-free* at
(866) 547-8722.

Do You Have Specialized Requirements?
We work with you to meet your tracking needs. We have our own staff of Support Technicians, Account Reps and a group of qualified Programmers. So when you call us, you deal with us direct, not a "call center in a foreign country".

Time-sensitive Delivery
We know and understand about "time sensitive" deliveries and the ever growing need for security. Our GPS Tracking services provide the necessary tools that "on the go" businesses require.
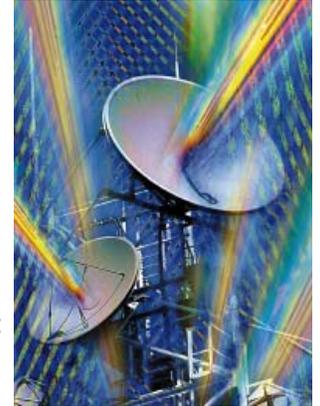

Update your account on-line
Use our on-line purchase option to start your service. Need to add or delete phone subscriptions to your tracking service? Try on our on-line support page or give us a call.

Tracknology

Now you can track your mobile personnel, workers, sales reps, drivers and family members **without** purchasing and installing expensive tracking equipment.

Install Tracknology on your GPS-java technology enabled cellular phone. The information is sent direct to your PC, so that you may utilize the software of your choice (such as Microsoft's Map-Point, Excel, etc) or a text-based report can be sent direct to your cellular phone.

Additionally, you won't need to go to the web to view your data. Instead, we'll delivery your data direct to your desktop. From there, you choose how you use the tracking information. View it on a map, spreadsheet or report. The data is yours to keep as historical information as well as up to the minute reporting.

Receive the Tracking Information as frequently as you like. You decide how frequently we send the data to you. Our Courier and Trucking customers require the data on a frequent basis, while our other customers may only require the data about once a day. The report can be sent in whatever time delay pattern you need - direct to your desktop or mobile phone.

Track time and location through a GPS-enabled mobile phone. This very useful for timestamping the work hours of your field employees, monitoring your fleet movements, or even to track the whereabouts of your teenage mobile phone user. Collect the "position fix" as frequently as you like. Depending on your needs, you may want the mobile entity to report their position every minute, every "X" minutes, every hour or once a day. You define how frequently we track the movements.

Driving Instructions:
As an additional service, we can even transmit driving instructions! Use MapPoint to create your route and Tracknology will send the driving instructions direct to your driver's cell phone.
